DARK SKY CERTIFIED FOR ECO-FRIENDLY LIGHTING

Hammerton Studio is proud to offer a broad selection of beautiful outdoor lights that are certified as ‘Dark Sky compliant’ by the International Dark Sky Association (IDA), which is the lighting industry’s authoritative voice on night sky light pollution. IDA-certified lights are required by a large and growing number of municipalities and planned communities across the U.S.

WHAT IS ‘DARK SKY’?

‘Dark Sky’ refers to the absence of artificial light in the night sky, which has become an increasingly rare phenomenon. In fact, the night sky over many cities is hundreds of times brighter than the natural starlit sky. Even in areas located miles from urban development, skyglow can obscure the stars from our sight and prevent us from experiencing a natural night sky.

More importantly, the devastating impact of artificial light on virtually all plants and animals is well documented by scientific research. Nocturnal animals are active entirely at night. Birds that migrate or hunt at night navigate by moonlight and starlight. Sea turtle hatchlings rely on the brighter night horizon to guide them across the sand to the water. The night sky affects sleep, nourishment, reproduction and other life-sustaining behaviors throughout the word’s ecosystems.

DARK SKY COMPLIANCE

Dark Sky certified outdoor lights minimize glare, reduce light trespass and don’t pollute the night sky. The light source is always downward directed and fully shielded, and light output is never brighter than functionally necessary. The International Dark Sky Association seal of approval provides objective third party certification for Dark Sky compliance and is mandated by the outdoor lighting ordinances of hundreds of municipalities and communities nationwide.

THE HAMMERTON STUDIO DIFFERENCE

IDA Dark Sky certification is only part of our outdoor lighting story. Hammerton Studio IDA certified fixtures combine beautiful architectural quality design and materials with the industry’s highest standard for long-lasting performance. Learn more about our all-climate fabrication and finish processes on the next page.

ALL-CLIMATE FINISHES: THE AAMA ADVANTAGE

Hammerton Studio offers the most durable outdoor decorative lighting solution available on the market today.

We use a three-step process that has been certified by the American Architectural Manufacturer’s Association (AAMA) to withstand fading and corrosion caused by sunlight, ocean air, humidity and extreme temperatures. So your outdoor fixtures will look beautiful and perform flawlessly for a long, long time. We guarantee it.

STEP ONE: DESIGN & MATERIAL

Hammerton Studio outdoor lighting is constructed in naturally corrosion-resistant aluminum. When properly pretreated and finished, aluminum stands up to the harshest coastal, tropical, desert and mountain climates.

But material is only half the story. We also design our outdoor products so that each component can be individually pretreated and finished prior to assembly, which eliminates the presence of microscopic voids that can trap corrosion-causing moisture.

STEP TWO: MARINE GRADE PRETREATMENT

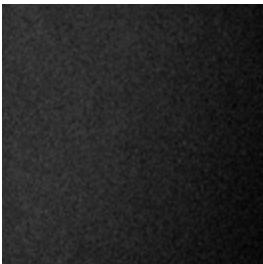

No doubt you’ve seen weathered outdoor fixtures covered in chalky white powder. Similar to iron rust, that is what happens to aluminum when it oxidizes. To resist oxidation, Hammerton Studio outdoor products are pretreated with a marine grade chromate conversion coating, which provides an added measure of resistance against the corrosive effects of humidity and salty ocean air.

STEP THREE: AAMA POWDER COAT FINISHES

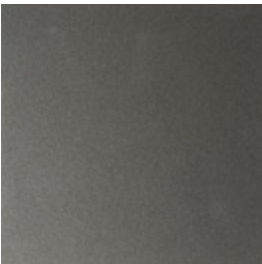

After pretreatment, Hammerton Studio outdoor products are finished with high performance AAMA 2604-rated powder coat paints. Made from super-durable polyester resins, AAMA 2604 finishes provide superior protection against UV rays, weathering and corrosion. In fact, they’re the same quality and grade of finish that’s used on aluminum clad skyscrapers.

AAMA 2604 finishes have been rigorously tested to ensure color and gloss retention in heavy UV and salt spray environments, so they are ideal for coastal and tropical climates. They are also environmentally compliant, so Hammerton Studio outdoor lights can contribute toward LEED credits from the U.S. Green Building Council.

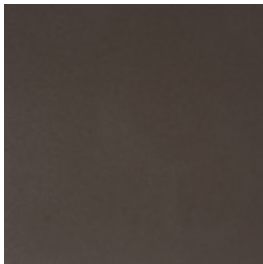

We offer three colors of AAMA 2604 all-weather outdoor finishes shown below.

TEXTURED BLACK (TB)

ARGENTO GREY (AG)

STATUARY BRONZE (SB)

MANTLE LIGHTING

A clean modern design that suits a wide range of architectural styles, the Mantle sconce pairs an intriguing silhouette with downward directed light diffused through slumped glass panels and crisp bands of metalwork. Aluminum construction, marine grade pre-treatment and AAMA 2604 powder coat finishes ensure long lasting beauty in all climates. Available in the two sizes shown.

TORRENT LIGHTING

This deceptively simple outdoor sconce design casts light downward on both sides through sparkling textured glass that's kiln-fused by Hammerton artisans. Aluminum construction, marine grade pre-treatment and AAMA 2604 powder coat finishes ensure long lasting beauty in all climates. Available in the two sizes shown.

CASCADE LIGHTING

An ideal outdoor solution for today's most popular architectures, the Cascade sconce combines crisp linear design with eye-catching details. An intriguing artisan glass diffuser casts 3,000K LED light downward through cascading rectangles of precision-cut metalwork. Aluminum construction, marine grade pre-treatment and AAMA 2604 powder coat finishes ensure long lasting beauty in all climates. Available in the two sizes shown.

QUAD LANTERN & SQUARE BOX LIGHTING

These Dark Sky compliant sconce styles combine straightforward silhouettes with eye-pleasing details. The compact scale of the 8”H Square Box sconce makes it an ideal solution for secondary locations and tight spaces, while the 18”H Quad lantern offers a stylish look for a wide range of exterior applications. Both products feature a chilled glass diffuser in a choice of Hammered Clear or Hammered Opal glass as shown. 3,000K AC LED lamping minimizes energy consumption and fixture maintenance.
