

## **ALL-CLIMATE OUTDOOR LIGHTING:** THE AAMA ADVANTAGE.

Our fixtures are engineered to endure. They're built from corrosion-resistant aluminum and protected with a marine-grade pretreatment and AAMAcertified powder coat finish. This proprietary threestep process meets the most rigorous standards set by the American Architectural Manufacturers Association (AAMA), ensuring long-lasting beauty and performance in even the harshest environments.

#### 1. Superior Materials & Smart Design

We start with naturally corrosion-resistant aluminum, proven to withstand coastal, desert, tropical, and mountain climates. But we don't stop there. Our fixtures are engineered for pre-finishing before assembly, to eliminate microscopic gaps that can trap moisture and lead to corrosion.

#### 2. Marine-Grade Pretreatment

Each component is pretreated with a chromate conversion coating to inhibit oxidation. This marine-grade barrier inhibits the powdery white residue often seen on weathered aluminum fixtures and protects against salt air, humidity, and moisture. While some manufacturers apply AAMA 2604-rated finishes, many skip this crucial pretreatment step to cut costs and speed production—compromising long-term durability.

#### 3. AAMA 2604 Powder Coat Finishes

We finish our fixtures with high-performance AAMA 2604-rated powder coat, just like those used on skyscraper exteriors. These super-durable finishes offer exceptional resistance to UV rays, fading, and corrosion, and are tested to maintain color and gloss in extreme conditions.

#### Guaranteed to Last. Built to Outshine.

Hammerton Studio outdoor lighting isn't just weather-resistant. It's weather-defiant. We guarantee it.

No outdoor lighting performs like Hammerton
